

Cap-Brulé's New Wastewater Treatment Facility

PROJECT UPDATE No. 25 August 2025

Construction of the Headworks Building:

- Ongoing activities include backfilling, formwork, rebar, concrete pouring, gate installation, leakage testing and walls waterproofing.
- Concrete work progressed with formwork, rebar installation and concrete pours at the UV. Rebar installation at mechanical/electrical room walls was completed.
- Waterproofing and backfilling activities have been carried out at the UV, up the retaining wall, and also the MH-23 was backfilled.
- The sluice gate was installed in the MH-24, and a leakage testing has been completed in the MHs 5, 6, 7 and 25.
